

Safe Generator Connection

Many Southwest Florida residents use portable electric generators to power their homes during electrical outages. While generators are a convenience, if used improperly, they can cause hazardous conditions for the homeowner and for electric utility crews working in the area.

GenerLink™ offered by LCEC eliminates the use of extension cords and other hazardous connections by providing a safe connection from the electric meter directly to the generator. GenerLink™ also detects when a generator is operating and automatically disconnects from the utility grid, eliminating dangerous backfeed.

Benefits of GenerLink™:

- Allows customers to run virtually any appliances up to capacity of their generator through their breaker panel (maximum 30 amp load)
- Easily installed behind the electric meter (maximum 200 amp service) by a certified LCEC technician and requires no rewiring of the customer's electrical system
- Comes equipped with a 20 or 30 amp, 4 prong twist lock with 20' connecting cord
- The system can move with you.
