

PORTRAITS *of* POSSIBILITIES

Most people associate surges with lightning. It's true that power surges can be caused by indirect lightning strikes. However, accidents, trees and animals also interfere with power lines. Additionally, 60 percent of surges occur inside the home from microwave ovens or air conditioning motors—even turning your lights on and off.

LCEC provides utility-grade surge protection for your appliances and expensive electronics. A two-stage approach is recommended:

Stage 1:

Meter-based protection is a heavy-duty surge arrester installed at the electric meter. This redirects high voltage at the point where it enters the home and protects major appliances such as air conditioners, washers, dryers, refrigerators, dishwashers, stoves and garbage disposals.

Stage 2:

Point-of-Use (POU) protection includes a selection of plug-in surge protection devices designed to protect your sensitive electronics such as computers, televisions, VCR's, DVD's, microwaves and garage door openers.

GenerLink™
offered by LCEC

Many Southwest Florida residents use portable electric generators to power their homes during electrical outages. While generators are a convenience, if used improperly, they can cause hazardous conditions for the homeowner and for electric utility crews working in the area.

GenerLink™ provides a safe connection from the electric meter directly to the generator.

Benefits of GenerLink™:

- Easiest and safest generator connection
- Eliminates the use of extension cords
- Detects when a generator is operating and automatically disconnects from the utility grid, eliminating dangerous backfeed
- Allows customers to run virtually any appliance up to capacity of their generator
- Installed behind the electric meter by a certified LCEC technician
- Connection at the meter keeps your portable generator outside where it's safe
