

Plug in to safety

Many Southwest Florida residents use portable electric generators to power their homes during electrical outages caused by summer storms. While generators are a convenience, if used improperly, they can cause hazardous conditions for the homeowner and for electric utility crews working in the area.

GenerLink™ provides a safe connection from the electric meter directly to the generator.

Benefits of GenerLink™:

- Easiest and safest generator connection
- Eliminates the use of extension cords
- Detects when a generator is operating and automatically disconnects from the utility grid, eliminating dangerous backfeed
- Allows customers to run virtually any appliance up to capacity of their generator
- Installed behind the electric meter by a certified LCEC technician
- Connection at the meter keeps your portable generator outside where it's safe

A solid restoration plan pays off for LCEC customers

LCEC began preparing for Fay three days prior to the storm's arrival. Additional contract crews were secured and on their way from North Carolina, Georgia and Alabama, scheduled to arrive on Monday morning.

Food and lodging, fuel, materials inventory, logistics and communications plans were all in place by Monday evening. Hundreds of LCEC employees were available for field crew support as soon as it was safe to work.

After Fay blew through LCEC's five-county service territory, crews began to work their magic. They were on a roll and opted to continue to work safely through the night until the last customer was restored at 4:15 a.m. on Wednesday morning – within 24 hours after the storm hit.

*Lehigh Acres Customer
Thank you LCEC for getting
my power back on so quick. If
I could, I would give you a big
hug for all you did!*
